

1. A computer system for receiving an issuance request for a digital certificate, and issuing the digital certificate; the system comprising:  
means for receiving and issuance request for a certificate for installing on a domain server;  
means for searching information related to the domain;  
means for acquiring contact information which is an e-mail address including at least a second level domain name of the domain, which is contact information for electronically contacting a domain supervisor;  
means for electronically contacting the domain supervisor using the contact information, and requesting permission or rejection of the issuance request; and  
means for generating and signing the certificate when permission is obtained, and electronically transferring the certificate for installation on the server.

7. A computer system for receiving an issuance request for a digital certificate, and issuing the digital certificate; the system comprising:  
means for receiving and issuance request for a certificate for installing on a domain server;  
means for acquiring information related to the domain;  
means for acquiring an e-mail address including at least a second level domain name of the domain, which is one or a plurality of e-mail addresses belonging to an authorizer;  
means for electronically contacting the authorizer using the e-mail address;  
means for rejecting or permitting the issuance request for the certificate;  
means for generating and signing the certificate; and  
means for transmitting the certificate for installation on the server.

8. A method for receiving an issuance request for a digital certificate by a computer, and issuing the digital certificate; the method comprising:  
a step for receiving and issuance request for a certificate for installing on a domain server;  
a step for acquiring information related to the domain;  
a step for acquiring an e-mail address including at least a second level domain name of the domain, which is one or a plurality of e-mail addresses belonging to an authorizer;  
a step for electronically contacting the authorizer using the e-mail address;  
a step for receiving instruction to permit the issuance request for the certificate;  
a step for generating and signing the certificate; and  
a step for transmitting the certificate for installation on the server.

9. A method for receiving an issuance request for a digital certificate by a computer, and issuing the digital certificate; the method comprising:  
a step for receiving and issuance request for a certificate for installing on a domain server;  
a step for searching information related to the domain;  
a step for acquiring contact information which is an e-mail address including at least a second level domain name of the domain, which is contact information for electronically contacting the domain supervisor;  
a step for electronically contacting the domain supervisor using the contact information, and

requesting permission or rejection of the issuance request for the certificate; and  
a step for generating and signing the certificate when the issuance request for the certificate is permitted, and electronically transmitting the certificate for installation on the server.

10. A method for receiving an issuance request for a digital certificate by a computer, and issuing the digital certificate; the method comprising:  
a step for receiving and issuance request for a certificate for installing on a domain server;  
a step for searching information related to the domain, and acquiring an e-mail address including at least a second level domain name of the domain;  
a step for determining whether or not the domain is prohibited; and  
a step for rejecting the issuance request for the certificate if it is determined that the domain is prohibited.

15. A computer system for receiving an issuance request for a digital certificate, and issuing the digital certificate; the system comprising:  
means for receiving and issuance request for a certificate for installing on a domain server;  
means for acquiring information related to the domain;  
means for issuing beforehand an e-mail address including at least a second level domain name of the domain, which is one or a plurality of e-mail addresses belonging to an authorizer, by attaching a mailbox name related to a second, third, fourth, ..., Nth (N is 2 or higher) request for the domain information;  
means for selecting one or a plurality of the e-mail addresses;  
means for electronically contacting the authorizer using the selected e-mail address;  
means for rejecting the issuance request for the certificate;  
means for permitting the issuance request for the certificate; and  
means for generating and signing the certificate, and transmitting the certificate for installation on the server.

16. A method for receiving an issuance request for a digital certificate by a computer, and issuing the digital certificate; the method comprising:  
a step for receiving and issuance request for a certificate for installing on a domain server;  
a step for searching information related to the domain;  
a step for acquiring contact information which is an e-mail address including at least a second level domain name of the domain, which is contact information for electronically contacting the domain supervisor;  
a step for electronically contacting the domain supervisor using the contact information, and requesting permission or rejection of the issuance request for the certificate; and  
a step for rejecting the issuance request for the certificate if rejected.
